About Me

I am an experienced, enthusiastic web developer, designer, and software engineer seeking a full-time position where I can start contributing as fast as possible.

I wake up to write code and I fall asleep writing code in my free time – my friends affectionately call me an addict. I am also very passionate about UI/UX design and creating design systems so that businesses can work efficiently. Finally, I am a very fast autodidactic learner and can pick up your company's tech stack with little friction.

Recent Experience

WEB DEVELOPER, SIONIC – 2021 - CURRENT - (1+ YEAR)

Sionic is a financial tech company where I work with a brilliant team to build scalable production web applications. I created a SPA web plugin for facilitating “Real-Time Payments” transactions between consumer and business banks from within mobile banking apps. I built an administrator portal in which business owners could interact with our database to easily monitor and update their information. I also designed and developed Sionic’s re-branded website, and took initiative to create a living design system to decrease project development bottlenecks between Sionic’s product teams – among other projects.

PROGRAMMING MENTOR – 2021 - CURRENT - (1 YEAR)

After work hours I have been teaching and mentoring; aiding in programming skills from absolute beginner to job-ready professional. I learned a lot through teaching and it helped me to solidify my previous knowledge.

FREELANCE WEB DEVELOPER – 2020 - 2021 - (1.5 YEARS)

After programming part-time for roughly one year, I started *Omega Design & Development Co.*, taking on clients from diverse industries; building their websites from scratch using up-to-date technologies. I enjoyed working with clients and fostering healthy business relationships while providing them with quality, cross-browser compatible production code.

Skills

Languages: HTML5, CSS/SCSS/SASS, JavaScript, TypeScript, Python, SQL, JSON,
(learning: Swift, Rust – – playing around with: Ruby, C)

Technologies: React.js, Node, Express, Git, Gulp, Webpack, Docker, Jest, Figma,
